ECOTEC SURFACES RECYCLED AND RENEWABLE SURFACING AT SEATRADE CRUISE GLOBAL

ST JAMES, MO. Prock Operations, Inc., will present EcoTec Surfaces, its recycled and renewable solid surface replacement, at Seatrade Cruise Global in Ft. Lauderdale, Florida, March 13 to 16. Seatrade features exhibitors and attendees from around the world, and is the epicenter of the cruise ship industry. EcoTec Surfaces will be displayed as a part of the Ship Design and Interiors sector of Seatrade. Prock Operations is excited to share EcoTec Surfaces, the lighter, stronger, and greener solid surface alternative. If you will be attending Seatrade, visit us on the second level in booth L2-217, and see EcoTec Surfaces for yourself.

EcoTec Surfaces is an environmentally friendly solid surface alternative that is 25% lighter than traditional solid surfaces, and is ideal for installations where weight is an issue, especially for the cruise ship and luxury yacht industry. It is also fire resistant, scratch resistant, and antimicrobial. EcoTec Surfaces can be molded into any shape and is available in a wide range of colors.

EcoTec Surfaces contains at least 53% recycled renewable materials, specifically 25% post-consumer recycled glass and 28% bio-renewable soybean resin. EcoTec Surfaces' recycled glass content includes windshield glass, which is a difficult glass to recycle and rarely used in other recycled glass products.

Our goal with EcoTec Surfaces is to provide an environmentally friendly recycled and renewable alternative to solid surfaces that is lighter, stronger, and greener. EcoTec Surfaces can be used anywhere solid surfaces can be used, from countertops to shower stalls, sink basins to vanities, and more. For more information about EcoTec Surfaces, visit our website, www.ecotecs-surfaces.com, or give us a call at 573.265.5191.

Prock Operations is a manufacturing company headquartered in St. James, Missouri. For 30 years, we have supported national and international customers across a wide variety of industries. Our custom products include cabinets, walk-in coolers and freezers, recycled and renewable surfacing, self-contained agricultural systems and more. We believe in a cleaner, greener future for manufacturing, and we've teamed up with industry leaders to make that possible. To learn more, visit www.prockops.com, email info@prockops.com, or call 573.265.5191.
